

@ Probably a good idea to Print Out these Directions. @

Directions to create a simple web site with four web pages
(**Index Page**, **Data Page**, **Graphic Page**, **Link Page**)

The **Index Page** is the **Home Page** or **Table of Contents**
which connects to other web pages with hyperlinks and
can be very easily used on a **NON-WWW** connected PC...
Thus: No Internet or WWW connection needed for learning...

Just for fun and to "view" the existing web site which YOU
will "modify" with your initials, name, information and pictures...

Double click on the **Index Web Page**. It has a **BIG BLUE "e"**...
There are two types of pages: **Web (html)** and **Code (text)**.
Click **Data Hyperlink** view & scroll **then** click **BACK** arrow.
Click **Graphic Hyperlink** view & scroll **then** click **BACK** arrow.
Click **Link Hyperlink** view & scroll **then** click **BACK** arrow.
Click the **X** in the **top right** of screen to **close** the **Index Web Page**...

Now, to work... You are going to "**modify**" these web pages...

Notice that "(2)" of the pages have a (texture) background
while "(2)" have a (color) background ... Changing colors is
not a big deal but changing the textures takes more work...
ALL pages, pictures, backgrounds must be in the "Same Folder"
so the pages can easily find the images and backgrounds...

HTML Colors

<http://www.geocities.com/SiliconValey/Network/2397>

HTML Textures

<http://www.webpagebackground.com/blue.htm>

#####

All pages must have (2) small images: Right & Left Aligned.

All pages must have (1) centered image: Top or Bottom

All pages must have music in the background with sound bar.

Two pages must have Color & Two pages must have texture BGs.
